The present application is characterised, inter alia, in that the claimed composition contains a siloxane with a ligand  $R^1$  and a ligand  $R^2$ , wherein  $R^1$  contains cyclo- or triquaternised amino functions and  $R^2$  is an amino-functional ligand. None of the cited documents discloses siloxanes having these two different ligands. The present application therefore meets the requirements of PCT Article 33(2)).

The cited documents D1, D2 and D3 describe aminosiloxane compositions in which the amino ligands simultaneously contain ammonium or quaternised amino groups and uncharged amino groups. None of these documents discloses or suggests that the present solution would be advantageous with different ligands  $R^1$  and  $R^2$ . The present application
